ABOUT US

Welcome to KATHPUTLI PLYWOOD

KATHPUTLI Ply is premium grade plywood and manufactured with utmost care to fulfill the requirements of an architect who need nothing less than the best. Thus KATHPUTLI plywood has all qualities like better bonding, perfect thickness, high strength, borer proof, termite resistant, excellent finishing of a high end product.

KATHPUTLI Plywood is manufactured in modern plant which is equipped with latest machineries and technology. Unlike other brands, which came in market directly after manufacturing, KATHPUTLI plywood is first checked in highly sophisticated laboratory by quality control inspectors and then get ready for the dispatch.

Shri Bala jee Industry, an ISO 9001, ISO 14001 certified company, based at Yamuna Nagar Haryana belongs to a group having wide ranged interest in wood based industries for over two decades. The company stands synonymous with quality-rich, truly durable and genuine application specific plywood. Company is known for quality rich plywood variants, set up a vastly superior infrastructure which is equipped with new age technology and cutting edge facilities. The wealth of expertise gained through more than two decades of manufacturing wood products, coupled with an unwavering commitment to excellence have always put its products on top. SHRI BAL JI INDUATRY have launched most wanted premium plywood brand KATHPUTLI-ply with even better features.

Absolute commitment to, and accent on better-than-the best Plywood has driven the company to consistently invest in research and technology. Naturally then, in no time KATHPUTLI-ply has again been counted as one of the finest and frontrunner brand in the sector as it bears that stamp of excellence which sets a benchmark in terms of quality, reliability, durability, aesthetics and customer satisfaction etc

Why to choose KATHPUTLI PLYWOOD

- **Why KATHPUTLI Ply is one of the best ply available in the market ?**

KATHPUTLI Ply exceeds the ISI standards. Which means the KATHPUTLI plywood is manufactured strictly as per the BIS specifications. It is manufactured in supervision of experience supervisors who gives the utmost care at the each process of its manufacturing. As we all know ingredients plays an important role to make a better product so KATHPUTLI plywood is made with selected and treated raw materials. Each batch of KATHPUTLI ply manufacturing is tested in lab by chemists to rollout and defects in panel.

- **Why KATHPUTLI Marine grade plywood gives you an advantage?**

Most effective Anti Borer Treatment:

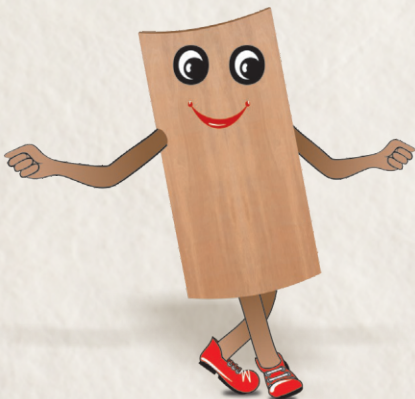

Every KATHPUTLI Marine grade plywood is treated with the anti borer treatment that is unique and has a lasting effect. Unlike other brands which just dip in chemicals, KATHPUTLI Marine ply chemically treats every sheet layer by layer to make it anti-borer plywood. To experience the best quality marine plywood , use KATHPUTLI HARDY plywood.

- **Are you planning for wood working in your interior? ask your carpenter to use only good quality plywood rather than MDF.**

Plywood is far better than MDF, there is no comparison of strength and life between Plywood and MDF. Following points will make you sure for the comparative strength of plywood:

Plywood has more resistant power to moisture and water than MDF. Because plywood is made with 2 to 2.5mm thick core veneers that are glued together with water proof resin. Whereas MDF is made with saw dust/ wood particle and due to this MDF gets swell when come to water or moisture contact.

- **Plywood has high nail holding capacity because it is made with the cross grain core and panel assembly. The cross grain structure of plywood binds the nail even at the edges.**
- **MDF is known for the weak nail holding capacity because it is made with wood particles or saw dust so the gripping power of nail get weak and thus it is not recommended to use MDF in bed and high load bearing wooden furniture.**

PLYWOOD

KATHPUTLI ply has been offering a uniquely made plywood range of products that are made with utmost care in modern plant. This is the reason why flawless and straight line finish in sides of KATHPUTLI ply is so different and unique. The calibration and unique pressing process provide us to check every minute composing mistakes and hence giving a solid and gapless product at the end. At present company is working full time to manufacture high quality product range with economical and attractive pricing approach which is really being liked by many young and emerging dealers of the market

HARDY

KATHPUTLI HARDY is made with selected hard wood core veneer. It is made for the high load bearing furniture making. HARDI is available in MARINE grade as well as commercial grade variant. KATHPUTLI HARDY Marine grade Ply is bonded with Fortified Phenol Formaldehyde Synthetic Resin as per standards of IS: 848:1974 under controlled temperature and pressure with requisite timing to obtain unmatched bonding.

KATHPUTLI HARDY Marine grade Ply is used in any application that needs high quality wooden sheet material. High quality in this context means resistance to cracking, breaking, shrinkage, twisting and warping.

100% treated Plywood:

Anti borer & termite chemical infusion in the premium quality KATHPUTLI HARDY Plywood gives it the ultimate resistant properties to protect the product from the attacks of borers and termites. Unlike ordinary plywood, KATHPUTLI HARDY Ply is capable of sustaining itself from the impact of attacks, rendering greater value to the product, in terms of life and usability

ULTRA

KATHPUTLI ULTRA Plywood is manufactured with alternate assembly of hard wood veneer. It is made for those who need best quality plywood in economical price. All the veneers, which go to the manufacturing, are empowered with Anti-Termite & Anti-Fungus chemicals. It is made of high quality timber veneers and is amongst the best in the industry. Both, the inner-core and outer surface is made from superior quality wood and is bonded with high solid content modified resin for the strong bonding.

It is available in MARINE grade and Commercial grade for the exterior and interior applications like Kitchen Cabinets, Exhaust Pipes, False Ceilings, and Speaker Cabinets etc.

Advantages of KATHPUTLI ULTRA ply

Being empowered with latest termite and borer chemicals, this plywood has greater resistance power to fight against borers & termites. In fact, the infusion of anti termite and borer chemical in the glue line area ensures that it remains protected & safe from the attack of borers & termites.

The alternate construction makes ULTRA a balanced plywood and resists against any bending or twisting.

ULTRA Max

KATHPUTLI ULTRA max is again a premium grade plywood empowered with the power of best timber and high solid content resin. It is manufactured with extra power of hard wood veneer with two way pressing system in a numeric controlled hydraulic press.

High Density hard wood timber is used to manufacture KATHPUTLI ULTRA max plywood which is the best among the timber available to manufacture plywood. High density wood is peeled with precision for smooth core. High solid content resin is used for stronger bonding between the panels. To strengthen the surface of panel, thicker GURJAN face is used.

Features of ULTRA max plywood

- Wider core and panel
- High solid content resin
- High nail holding capacity
- Completely Treated Logs
- Smooth surface
- Lab tested for flawless quality
- In-house raw materials
- Hard wood core and panel
- High density
- Long life

Ultra Power Blockboard

KATHPUTLI ultra power Block Board is a premium quality board with high resistant properties against borer and termite attacks. All the three components of this block board i.e. Face Veneer, Core Veneer & wooden battens are well matched. The wooden battens are thoroughly seasoned in scientifically run seasoning kiln plants and then cut with great precision to obtain uniform thickness.

These battens are systematically arranged and utmost care is taken to avoid any extra gap between the battens. Regular tests are conducted to maintain the quality of block boards as per the standards of IS:1659.

Advantages of KATHPUTLI Block board:

Frames and Battens are used after proper treatment and seasoning.

The width of battens are as per IS:1659, i.e. 25 to 30mm.

The assembled block board (a central core of a wooden frame, two cross bands and two face veneers) are pressed in hot press with resin mixed with anti-termite borer chemical under high temperature and pressure.

The finished board is again treated with preservative chemical at temperature of more than 60 degree Celsius

Finished and lab tested boards have excellent screw holding capacity

Availability—

KATHPUTLI block board is available in two variants to match up your wood working requirements:

ALPINE

It the best quality block board made with 100% PINE WOOD. ALPINE is available in BWP and commercial grade

PROWUD

KATHPUTLI PROWUD block board is made with high density POPLAR wood and available in BWP and commercial grade for exterior and interior applications respectively.

DOORS

MUSCULAR

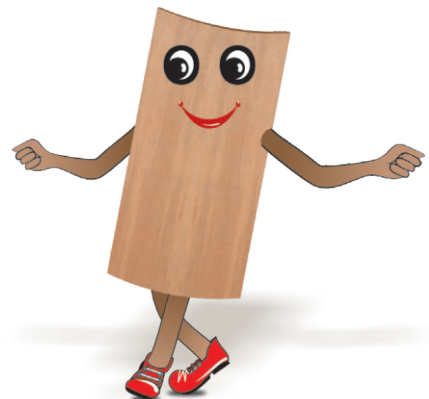

KATHPUTLI MUSCULAR water proof flush door is a durable product and known for its excellent quality, exceptional finish and unique dimensional stability. It is made of selected hardwood frames and accurate battens. It is evenly constructed with same species of timber that provide a longer life. BWP grade of Phenol Formaldehyde resin is used for bonding the layers. It has extra lock rail that provides great strength to the handles and knobs. Its hardwood frames provide strength for fitting of hinges and anti deviation resistance. A complete testing of Flush doors enables the company to render assured strength, safety and peace. These flush doors are shop-floor tested and conforms to IS: 2202 specification.

Treated Doors with Hot & cold Diffusing technology:

KATHPUTLI MUSCULAR flush doors are treated with Hot & Cold diffusion technology which gives it the ultimate resistant properties to hold back the product from the attacks of borers and termites. Unlike ordinary flush door, treated MUSCULAR flush doors are capable of sustaining itself from the impact of attacks, rendering greater value to the product, in terms of life and usability
